

What is claimed is:

1. A processing method of a storage managing server connected to a storage device and a storage managing terminal,

wherein the storage managing server receives a first request issued from said storage managing terminal and executing the processing of the storage managing server, and a second request for executing processing including the communication of constructional information of said storage device between said storage device and the storage managing server, and

the storage managing server starts processing with respect to said second request before the storage managing server transmits a response to said first request to said storage managing terminal.

2. The processing method of the storage managing server according to claim 1, wherein

said first request is a login request from said storage managing terminal to the storage managing server.

3. A storage managing server connected to a storage device and a storage managing terminal,

wherein the storage managing server performs first processing executed in response to a first request from said storage managing terminal, and second processing for executing processing which is executed in response to a second request from said storage managing terminal and includes the communication of constructional information of said storage

device between said storage device and the storage managing server, and

the storage managing server starts said second processing in accordance with said first processing before the response to said storage managing terminal.

4. The storage managing server according to claim 3, wherein

said first processing is the download of a manager program for operating the constructional information of said storage device.

5. A processing method of a storage managing terminal connected to a storage managing server connected to a storage device,

wherein a first request for executing the processing of said storage managing server with respect to said storage managing server, and a second request for executing processing including the communication of constructional information of said storage device between said storage device and said storage managing server are made such that said second request is made in accordance with said first request before a response from said storage managing server is made.

6. The processing method of the storage managing terminal according to claim 5, wherein

said first request is a login request.

7. A storage managing terminal connected to a storage

managing server connected to a storage device,
wherein the storage managing terminal performs
transmission processing for making a first request toward said
storage managing server, and a second request for executing
processing which is executed in response to the second request
toward said storage managing server and includes the
communication of constructional information of said storage
device between said storage device and said storage managing
server, and

said second transmission processing is performed in
accordance with said first request before the response from
said storage managing server is made.

8. The storage managing terminal according to claim 7,
wherein

said first request is a login request.

9. A processing method of a storage managing system
constructed by a storage managing server connected to a storage
device, and a storage managing terminal connected to the storage
managing server,

wherein said storage managing terminal issues a first
request for executing the processing of the storage managing
server and a second request for executing processing including
the communication of constructional information of said storage
device between said storage device and said storage managing
server, to said storage managing server, and said storage

managing server receiving the first and second requests starts processing with respect to said second request before a response to said first request is transmitted to said storage managing terminal.

10. The processing method of the storage managing system according to claim 9, wherein

said first request is a login request.

11. A storage managing system constructed by a storage managing server connected to a storage device, and a storage managing terminal connected to the storage managing server,

wherein said storage managing terminal performs transmission processing for making a first request toward said storage managing server, and a second request for executing processing including the communication of constructional information of said storage device by said storage managing server between said storage device and said storage managing server,

said storage managing server performs first processing executed in response to the first request from said storage managing terminal, and second processing for executing processing which is executed in response to the second request from said storage managing terminal and includes the communication of the constructional information of said storage device between said storage device and the storage managing server, and

said second processing with respect to the second request from said storage managing terminal is started in accordance with said first processing with respect to the first request from said storage managing terminal before said storage managing server makes the response to said storage managing terminal.

12. The storage managing system according to claim 11, wherein

 said first request is a login request, and said first processing is the download of a manager program for operating the constructional information of said storage device.
